Notice of Discontinuation of "LICGC™ AG-01 membranes"

Dear Customers,

Thank you for using our Lithium Ion Conducting Glass Ceramic, LICGC™, membranes in your research and development projects. This letter serves to inform you that Ohara will no longer produce the LICGC™ AG-01 polished membranes and we will instead focus our attention on the production of the LICGC™ SP-01 tapecast & sintered membranes.

Discontinuation of Product: LICGC™ AG-01 membranes

Recommended Alternative Product: LICGC™ SP-01 membranes

We apologize for any inconvenience this product discontinuation may cause you but we will continue to sell the AG-01 polished membranes from our stock. Please contact Ms. Katelyn Pang (katelynpang@oharacorp.com) with your inquiries.

We would like to introduce our LICGC™ SP-01 tapecast & sintered membranes as a viable alternative. The SP-01 membranes are available in most of the same sizes as our AG-01 membranes and the ionic conductivity is higher at $\sim 2.5 \times 10^{-4}$ S/cm at room temperature.

Thank you for your continued interest in our Lithium Ion Conducting Glass Ceramic, LICGC™, membranes

Very truly yours,

OHARA CORPORATION

Brion Hoffman
President
